APP CAPABILITIES

- **Multiple Unlock Methods:** The Smart Glass Door Lock supports various access methods, including fingerprint recognition, PIN codes, RFID cards, smartphone apps (via Bluetooth or Wi-Fi), and even traditional mechanical keys.
- **Remote Access and Control:** Users can lock and unlock the door remotely through a smartphone app, which is particularly useful for granting temporary access to guests or service providers.
- **Automatic Locking:** The lock can be set to auto-lock after a specified period, ensuring the door remains secure even if the user forgets to lock it manually.
- **User Management:** It allows multiple users to be added with different access levels. This feature is ideal for managing access in shared spaces such as offices or commercial buildings.
- **Audit Trail and Logs:** The lock can record user activity and unlock history, providing a detailed log of who accessed the door and when. This is useful for security monitoring and auditing.
